The Northern Pass should be entirely buried. I understand that burying the line costs around \$8 million more per mile of below- ground lines installed as appraised to above- ground lines but as a NH resident, that is not my problem. If it is too expensive for HQ to bury the lines then they should figure out a different way to obtain their energy. They have an entire line buried to New York from Canada and they should be able to do the same with NH. The Northern Pass hardly benefits NH. Temporary employment opportunities and minimum savings in energy expenses per year does not compare to the foreseen decreased property values and tourist rates and hideous effects it would have on the landscape. It simply does not benefit NH enough to have the Northern Pass installed above ground.
