The Northern Pass project is an incredibly disastrous project proposal that would harshly divide and corrupt New Hampshire's most valuable natural resource: our beautiful forests and mountains, the picturesque landscape that provides so much beauty and economic resilience. It would be completely unfair to construct power lines that will more than likely negatively affect tourism of the Northern towns that depend on folks visiting the area to enjoy the breathtaking views and woods that surround them. This project does not positively impact businesses in the state or respect the interests of those who would be negatively affected. Even if this project were to lower electric bills by a significant margin for everyone in the state, it would still not justify tearing up the land and causing major headaches and financial insecurity for those that live along or around the path of the lines. I strongly oppose this project and am truly gobsmacked that the state would even consider something that would be so detrimental, and contrary to the state's values, interests, and economic vitality.
