### CommenterWords

Northern pass is a prime example of the human species to consume and destroy the planet. We should be focused on reducing and conserving and creating more efficient ways to use energy. Humans are wasteful and will squander this resource. In 10-15 years maybe sooner we will be talking about how we can get more energy to these locations. If we do not stop now , make a decision and turn the direction about energy and how we use and produce it then we are all doomed. Seems like everyone realizes it but is to afraid to confront it. It's time to stand up and change the direction, be an example for the rest of the United States and world that we are the true leaders and figure out a different path for energy production and conservation. Do what's right!!!
