Dear Pamela Monroe,

Hi folks, we all understand the importance of low cost energy. We also understand the value of our scenic White Mountains and how they can never be replaced. Alternative electric solutions are available now and new and more powerful systems are becoming available everyday. Don't be tempted by the trade off that will ruin NH's White Mountains and at the same time put us on the hook for imported power. Let's grow our green NH based power solutions instead. Let's put Granite Staters to work instead of Canadians. Please look ahead and consider all the negative impacts this project will have. Think of the missed opportunities as well. Keep our power home grown. Please

Sincerely,  
Chris Reagan
