The northern pass project is not a responsible use of the land. The people of New Hampshire have nothing to benefit from this, it will only destroy beautiful land and property values while selling the people of this state out. It will provide most of the benefit to people who do not live here, which is a disgrace to the residents of this state whom pay ridiculously high property taxes to live here. The majority of people in NH oppose this project, and will see little to no positive change in their electric bill. Once the natural beauty of this state is ruined we will not be able to get it back. There are more responsible ways that the land could be used that would benefit the residents of the state and increase tourism, which would in turn provide more revenue for the state. Destroying the most beautiful area in the state will only hurt everyone, and will destroy future opportunity to develop the land for recreational/tourism reasons. It is incredibly irresponsible and a disgrace to the hard working residents of this state to allow this project to continue. I greatly oppose this proposed use of our land- there is no benefit for the residents of the state, it will only benefit Eversource and the people who live in Mass and CT. There are much better ways the land could be used that would keep the dignity of the residents and the state- we are better than being an extension cord for wealthier states' energy needs. The new jobs created by this project would be temporary and would likely be outsourced, so that is not enough of a reason to betray the residents of this beautiful state.
