### CommenterWords

To the Honorable (and probably exhausted) SEC committee;

It is impossible to evaluate the site of a project that has never solidified its siting. The requirements have not been met, and this project still does NOT know where it is going to put its towers, lines, or underground lines. The public knows this, and cannot figure out how the SEC can do its job with the incomplete project whose siting of the project is a continually moving target.

Please deny the application of the Northern Pass because it does NOT have its application or its siting complete. Neither does it have its stated permissions to move through each place that it says it wants to site itself.

Thank you for your time, and have a great holiday. You all deserve a long time off.
