This is a project that will have a permanent, devastating effect on New Hampshire. The major effects will be on our tourist industry; serious health effects...scale of the transmission lines are known to cause cancer; property values. The attorney for the public did not present proper data on these effects. The expert list was mediocre at best. When this is presented to the Commission for deliberation it will not be with the most and best data given to them. The Commission itself does not have the expertise to be rendering such as decision. The Commission is political appointments and have been known to be connected both by friendship and family relatives. The people have not had proper representation and the hearing process should be discounted and start from the beginning with an Attorney representing the public that has no political ties. This project will probably be approved despite its shortcomings. This will be a disgrace because this will be a lasting disaster for many generations to come. Kathlyn J. Keene, Jefferson, New Hampshire. P.S. Hoping this is read and considered by someone who truly has the power vote and the courage to vote against this project.
