This state must preserve its forests for a multitude of reasons from environmental to economic. Eversource does not have a good track record amongst my seacoast communities and is widely reputed to be neglectful of the needs of the land, townships and people their projects affect. I do not believe this project is necessary, especially considering the fact we need to invest in renewable, sustainable energies for our own state for the sake of our future and economic growth. Eversource seeks profit over being on good terms with the communities whose energy they monopolize, and I believe this will make for more danger in this project. Please decline this project for the sake of my generation's future and of the forests. We are scared and we need your help to preserve what precious nature we have left and help it flourish.
