I have lived in NH for 7 years now. I have vacationed and hiked, skied during all seasons in NH with my children for 33 years. THERE ARE SO MANY other ways to produce power/clean power than this plan. It's a national forrest, no fracking should be done anywhere in the National Forests, nor near any cities, towns. It will cause more harm than good. With the draught we had last year fracking will only diminish any water capacity by letting it seep way into the ground. NH residents will loose value in their homes that are in the Northern Pass zone! I have always wanted to build or buy farther North in NH but not with this northern pass project. I realize that my words and thoughts will be read; but at my age I also realize it will ignored for the almighty \$ but most of the politicians - we need to put an end to lobbyist and the greed of big corporations!
