### CommenterWords

Dear SEC:

This project has been named incorrectly from the start: It should be "Invasion for Profit by Hydro-Quebec" (a Canadian corporation), proposed by their agent, EverSource. This 'Northern Pass' HARMS New Hampshire's natural resources, economy, and income potential for their own profit!! This is not acceptable! There is no benefit to New Hampshire - any money they would pay would not do anything to begin to compensate our state for the massive loss sustained going forward.

This proposal, should it go forward (Which is inadvisable) would result in major visual impacts that negatively affect natural resources and cut a swath through scenic landscapes, including the White Mountain National Forest. The project will also cause drastic, adverse impacts to wetlands, habitats, scenic resources, and natural habitats.

2. THREATEN New Hampshire's future over the price of a cup of coffee. The project is projected to save ratepayers ONLY \$1.50 per month.

3. HARM New Hampshire's economy by causing adverse impacts to tourism, recreation, and property values. Nearly 90 New Hampshire businesses have come out against the project.

4. MAKE New Hampshire an extension cord to southern New England. Northern Pass will provide New Hampshire with only a small portion of the power it plans to carry through our state. Massachusetts gets nearly all of the electricity; New Hampshire gets all the negative impacts. Massachusetts has not acted in an environmentally responsible manner by searching out other methods of sustainable, green electricity!

**STOP THE HYDRO-QUEBEC project before it DESTROYS NEW HAMPSHIRE!!!**  
Please LISTEN! and Thank you.
