

NHSEC

The impact assessment does not include all those impacted.

New Hampshire watersheds spread far beyond the towns targeted to receive the pipeline.

Wilton is not targeted to receive the pipeline however, The Monadnock Mountain Spring Water company is in Wilton at the junction of routes 31 and 101. That company relies on the purity of the aquifers and the Souhegan River watershed. Pollution and run off from construction of the pipeline and leaching chemicals and emissions will fall somewhere and likely taint the waters being tapped by this company and resident wells.

Another reason to oppose NED.

Thank you
