

NHSEC

Actual measurements of other Kinder Morgan, co-location pipe projects show a 150 foot wide swath of clear cut land ALONG SIDE the 100+ foot existing power line right of way. 71 miles of pipe in NH works out to over 1500 acres of land deforested. This is how KM defines co-location by their actions and not by their statements. How does the NH SEC define co-location?

Thank you
Paul Stevens
