Ladies and Gentlemen: SEC 220102-02 9 March 2022

I am only discussing Charge #1

Any meteorologist with a little understanding of sound, knows that the only nights on which the turbine noise can exceed 40 Db are those nights on which the winds passing the turbine blades are strong, AND the temperature structure in the area is inverted, with warmer temperatures above a colder layer at the ground. On this, AWE will wholeheartedly agree.

Has AWE measured their sounds on such nights?

It boggles the mind that AWE could spend a reported \$65 million, and has NOT made measurements. Since your subcommittee consistently refused to ask for these data, I must assume they already knew the answer. AND must I further assume that this current Committee is NOT so incurious that you do NOT know? So I will ask you, why do you and the members of your Committee refuse to share this vital information with the neighbors?

Do you expect us to believe that you, and AWE, do NOT know:

WHEN, AND IN WHAT WEATHER, THE AWE TURBINE NOISES EXCEED 40 Db?

\$65 million dollars, and AWE does NOT know, and did not try to find out?  
REALLY???

AWE has always maintained, through hundreds of hours of hearings, appeals, court filings, etc., that they do not exceed 40 Db. In fact they offered a guarantee to the original hearing examiners to shut down any offending turbine which caused an

excess over 40 Db.

But in order to isolate the offending turbine, to live up to their guarantee, they need to know what weather caused which turbine to exceed 40 Db. They have never shown that they could make such a determination!

WHY ARE YOU SO AFRAID TO GET US THE WEATHER AND SOUND DATA????

Thank you Mr. Chairman and members.....

Dr. Fred Ward (meteorologist)
